Evening Brief

Date: Tuesday, July 25, 2017

Weather Summary

Monsoonal moisture overspreads most of the region Wednesday with widespread clouds, cool temperatures, and scattered showers and wet thunderstorms. Heaviest rainfall should be across Central and Eastern NV where localized flooding is possible.

Preparedness Levels

Great Basin	4
National	4

Great Basin Fire Activity (from Irwin): Moderate Activity

New Fires and Acres: 21 fires for 1,323.1 acres 3,676 acres large fire growth

Resources:

- Crews: 17 T1 IHCs in GB: 13 committed, 1 RR, 3 available.
 - T2 IMT Team 4 – Roide is committed to the Missouri Fire.
 - GBCC has committed an estimated 112 + type 3, 4, 6 engines.
 - 3-T1 and 6-T2 helicopters are available in GACC.
 - NW T2 IMT Johnson committed to the Mahogany and Leonard Creek Fires
 - T2 IMT Team 6 - Chadwick committed to the Preacher Fire
-

Great Basin Fire Potential Summary

Fuels continue to moisten across the region, as we are several days into monsoonal activity. The most rapid moistening is expected across Central and Eastern Nevada, where the most widespread precipitation is expected again today. Elsewhere, clouds and higher humidity, along with isolated to scattered showers will also begin to raise fuel moisture. Lighter fuels, represented by 10-hr FM will see the most rapid moistening over the next 2 days.

ERC's will remain critical over much of Idaho, but also will begin to edge downwards in response to the cooler, more humid conditions.

Fire danger remains elevated across far western and northern portions of the Great Basin, and it will be these areas that will dry out the quickest later this week. But more monsoonal moisture returns to the Great Basin this weekend, bringing a decrease in overall fire danger to many southern and central areas of the Great Basin this weekend. .

Sagebrush live fuel moisture, which has a much slower response time to short term precipitation, has been on a rapid downward trend the past few weeks in most areas, finally reaching near to just below normal mid-summer levels across the northern and western portions of the Great Basin. Sagebrush live fuel moisture across Central NV/Utah has dropped significantly to below normal and in some areas is approaching record lows.
